SUMMARY

Java developer who cares about getting the fundamentals right: DSA (230+ LeetCode problems), OOP, and code that is easy to debug. I build and deploy Spring Boot backends with REST APIs, JWT security, PostgreSQL/PostGIS, Kafka, and Redis, and I enjoy chasing down hard bugs, from a palm-vein biometric pipeline to an on-demand services marketplace. Currently building features for a live Android app at AppVersal, and looking for a team where code reviews and mentorship will sharpen how I work. B.Tech Information Technology, 2027.

WORK EXPERIENCE

Android App Developer | AppVersal | Noida, India | 08/2026 - Present
Global Keyboard | Android keyboard (IME) app live on Google Play
- Build and ship Kotlin features for a keyboard app on Google Play, including custom GIF capture and Giphy-backed sticker search.
- Worked on text-to-speech and Hindi handwriting input, two features that go well beyond a standard keyboard.

Software Engineer Intern | KYROS Software Ltd. | United Kingdom (Remote) | 05/2026 - 08/2026
RyzeID | palm-vein biometric enrollment and verification platform
- Owned the enrollment-to-match pipeline end to end: a Spring Boot/PostgreSQL backend, an Electron desktop client, and a native C vendor SDK called through JNA.
- Optimized enrollment by replacing batch countdown capture with live per-frame streaming, removing a 100ms polling delay per frame so capture time now depends only on the hardware round trip.
- Debugged a silent failure across the IPC boundary that hid backend enrollment rejections; users now see the real error immediately instead of a misleading 30-second timeout.
- Traced repeated false rejections by lining up live logs with direct database inspection, then removed brittle client-side validation while keeping dual-template 1:2 matching intact.
- Added duplicate detection across users and for self-enrollment at a 0.95 similarity threshold, and containerized the backend with Docker Compose.

Freelance Android Engineer | Zyloq | Switzerland (Remote) | 11/2025 - 12/2025
- Connected an Android client to a Spring Boot REST API, handling request/response mapping, error states, and UI state across the rental and payment flows.

PROJECTS

SportsConnect Backend | Deployed Backend | GitHub | Google Play | Spring Boot, PostgreSQL/PostGIS, Spring Security, JPA
- Built a Spring Boot backend with 29 REST endpoints over 11 JPA entities, split into controller, service, and repository layers, and deployed it on a Neon-hosted PostgreSQL instance.
- Wrote stateless JWT authentication with a custom OncePerRequestFilter that sets the SecurityContext inside the Spring Security filter chain.
- Kept search fast and flexible with JPA Specifications and the Criteria API for dynamic filters, PostGIS geo-radius queries, and server-side pagination through Pageable.

Kenu Backend | Deployed | Private Client Project | Spring Boot, PostgreSQL/PostGIS, Spring Security, Kafka, Redis
- Built and deployed backend services for an on-demand household services marketplace serving the DACH region and Switzerland.
- Added JWT role-based access control, PostGIS location-based job search, Kafka event streaming, and Redis caching.
- Integrated Stripe Connect payments, Wise transfers, Twilio OTP login, Didit KYC webhooks, and Firebase Cloud Messaging.
- Built STOMP WebSocket chat, fixed Kafka and ZooKeeper Docker networking failures, and maintained the CI/CD pipeline while working through shared Git branches and rebases with the team.

TECHNICAL SKILLS

Languages: Java, C, Kotlin, SQL
Core CS: Data Structures & Algorithms, Object-Oriented Programming, Complexity Analysis, Debugging, Code Optimization
Backend: Spring Boot, Spring Security, REST APIs, JPA/Hibernate, JWT, OAuth2, WebSockets (STOMP), Kafka
Databases & Caching: PostgreSQL, PostGIS, Redis, MySQL, MongoDB, Firebase Firestore
Infrastructure & Tools: Git, GitHub, GitLab, Docker, Docker Compose, CI/CD, Gradle, IntelliJ IDEA, Postman
Integrations: Stripe Connect, Wise, Twilio, Didit KYC, Firebase Cloud Messaging, Google Maps SDK

EDUCATION

B.Tech, Information Technology | KIET Group of Institutions | Delhi NCR, India | 07/2023 - 05/2027 (Expected)
Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Distributed Systems, Cloud Computing.

ACHIEVEMENTS & LEADERSHIP

Club Coordinator & Core Lead | CPByte Technical Club, KIET Group of Institutions
- Mentored 30+ students in Android development and data structures across 5+ workshops and live project sessions.
- Trained 50+ attendees per bootcamp on Spring Boot, Git/GitHub, and Android development.
- Solved 230+ problems on LeetCode to keep data structures and algorithms sharp.
