SUMMARY

A Java/Spring Boot and Android developer pursuing a B.Tech in Information Technology (2027). Working with Kotlin, Jetpack Compose, Spring Boot, PostgreSQL/PostGIS, and Electron, I am the sole engineer for a UK software company's production biometric verification platform.

WORK EXPERIENCE

App Developer — AppVersal | Noida, India | 08/2026–Present

Global Keyboard *is an Android IME available on Google Play that offers unique themes, in-keyboard suggestions, and the ability to create stickers and GIFs.*

- Added Giphy-backed sticker search and custom GIF capture to the keyboard's media picker.
- The keyboard's input choices now include text-to-speech output and Hindi handwriting recognition.

Software Engineer Intern — KYROS Software Ltd. | United Kingdom (Remote) | May 2026–August 2026

RyzeID *is a platform for palm vein biometric enrollment and verification.*

- Owned the whole capture-to-match pipeline, including a native C vendor SDK for palm vein hardware bound by JNA, an Electron desktop client, and a Spring Boot/PostgreSQL backend.
- Redesigned enrollment from batch countdown capture to live per-frame streaming, cutting down on capture time to hardware round-trip only and eliminating a 100 ms artificial polling delay per frame.
- Replaced a deceptive 30-second timeout with instantaneous, precise error reporting to fix a silent-failure problem that swallowed every backend enrollment refusal across the Electron IPC border.
- Cross-user and self-enrollment duplicate-palm detection was included at a vendor-recommended 0.95 similarity threshold; containerized the backend with Docker Compose and packaged the client as a portable Windows executable.

Freelance Android Engineer — Zyloq | Live on Google Play | Switzerland (Remote) | November 2025 – December 2025

- Developed the Jetpack Compose UI Layer for a consumer power-bank rental application, currently deployed on Google Play. Built screens for the station map, QR rental, live timer, and rental history.
- Integrated the client against the Spring Boot REST API, implemented request/response handling, error/loading states, and state management for the rental/payment flows.

PROJECTS

Sports Connect | **Live on Google Play** | Android repo · Backend repo | *Spring Boot, Kotlin, Jetpack Compose, Hilt, Room, Coroutines, PostgreSQL/PostGIS, JWT*

- Using 25 typed Retrofit endpoints with Hilt, Room, Coroutines, and StateFlow, a sports event discovery application was built using 12 Compose screens and 13 ViewModels on Clean Architecture (MVVM).
- Developed the Spring Boot backend, which exposes 29 REST APIs over 11 JPA entities and uses PostGIS geo-radius queries for event search and stateless JWT authentication via a custom OncePerRequestFilter.
- Using the Criteria API and JPA Specifications, composable dynamic filtering was implemented. Pageable was used for server-side pagination.

Project Hub | GitHub repo | *Kotlin, Jetpack Compose, Firebase, Firestore, Firebase Authentication*

- Developed a freelance bidding platform which was modelled on five Firestore collections for assignments, bids, chat channels, messages, and users, with snapshot listeners which triggered real-time bid updates.
- Integrated push notifications via Firebase Cloud Messaging and created 4 Cloud Functions which were triggered by new bids, bid acceptance, new messages, and new ratings.
- Designed the app's Material 3 Compose UI which consisted of 12 screens for creating assignments, bidding, chatting, and managing profiles, and implemented async UI states using Kotlin Coroutines and Flow.

TECHNICAL SKILLS

Languages: Java, Kotlin, SQL, C
Android & Mobile: Jetpack Compose, Android SDK, Material 3, Hilt, Room, Retrofit, OkHttp, Coroutines, Flow, MVVM, Clean Architecture, Kotlin Multiplatform, Firebase Cloud Messaging
Backend: Spring Boot, Spring Security, REST APIs, JPA/Hibernate, JWT, OAuth2, WebSockets (STOMP)
Databases & Caching: PostgreSQL, PostGIS, MySQL, MongoDB, Redis, Firebase Firestore
Infrastructure & Tools: Docker, Docker Compose, Kafka, CI/CD, Git, GitHub, GitLab, Gradle, Android Studio, IntelliJ IDEA, Postman
Payments & Integrations: Stripe, Wise, Razorpay, Twilio, Google Maps SDK, Firebase

EDUCATION

B.Tech, Information Technology — KIET Group of Institutions | Delhi NCR, India | 07/2023 – 05/2027 (Expected)

- Relevant coursework: Data Structures & Algorithms, Distributed Systems, Cloud Computing, Object-Oriented Programming, DBMS.

ACHIEVEMENTS & LEADERSHIP

Club Coordinator & Core Lead — CPByte Technical Club, KIET Group of Institutions

- Mentored 30+ students in Android development and data structures across 5+ workshops and live project sessions.
- Trained 50+ attendees per bootcamp on Spring Boot, Git/GitHub, and Android development.
- Organized Code Rush, a DSA contest with 100+ participants; solved 230+ problems on LeetCode.
